# Industrietechnik – We have been on the market for 40 years

Ever since Industrietechnik was established in 1981, the very foundation of our company has been our ability to listen. In close cooperation with every new customer, we have developed our product range into what it is today - a complete and diverse range of HVAC/R field products for measurement and control in building automation.

Our head office and production site is situated in Brixen, South Tyrol, in the heart of the European Alps at the cultural crossroads of northern and southern Europe. Companies from our region are often known for their quality, long standing experience and extensive know-how. Many businesses in our area are market leaders in their sectors, even in an international context. Our headquarters hosts the sales offices, R&D, our testing facilities and a modern production site with state of the art equipment. This gives us full control over the whole production chain from development and design to production and dispatch.

Today, we are a leading provider of one of the widest ranges of field devices including valves and actuators, electronic and electromechanical devices that can be found on the global market. Together, we sell products to installers, system integrators, wholesalers and OEM-customers in more than 80 countries and we are constantly expanding - and we continue to listen.

## Energy-efficient systems. Optimized hydronic flow.

Pressure-independent control valves are the ideal solution for any modern HVAC system. Besides saving operating costs and being easy to install, they reduce pump power and always ensure the correct flow in partial and full load situations. The valves automatically keep the differential pressure on a constant level, no matter the load conditions. This ensures stable and precise temperature control.

At Industrietechnik we provide pressure-independent control valves and matching actuators for reliable and sustainable systems. Our latest addition to the range is the new SEZ2 actuator series. Besides being compatible with most zone valves available on the market, the series fits perfectly with our VFP series of pressure-independent control valves.

### HANDLING THE SYSTEM BECOMES READY STEADY GO.

- Select the valve based on the load requirement.
- Skip KV-, pressure drop-, and valve authority calculations and save hours.
- When the system changes and new zones are added there is no need to rebalance the system.

## We think **bigger** with the new TPDA-12CX

TPDA-12CX is our range of new designed differential pressure transmitters with communication via Modbus. It is based on a sensor technology with among the highest accuracy and long-term stability value on the market. Installation

and setup are easy, and it can optionally be deployed as an expansion unit, optimizing the use of cables. With four additional I/O: s, two universal inputs and two universal outputs, TPDA-12CX offer major expansion possibilities!

## We expand our DB-TA range with a new controller

Now more efficient, the new DB-TA-385-433 can also control fan-coil applications for EC fans.

### SHORT FACTS:

- Knob for temperature setting
- Manual selection of thermostatic fan/continuous fan/off
- 3 motor speeds, 2 fixed or 1 modulating

We believe in the combination of smart thinking, competence, reliability and the reduction of complexity.

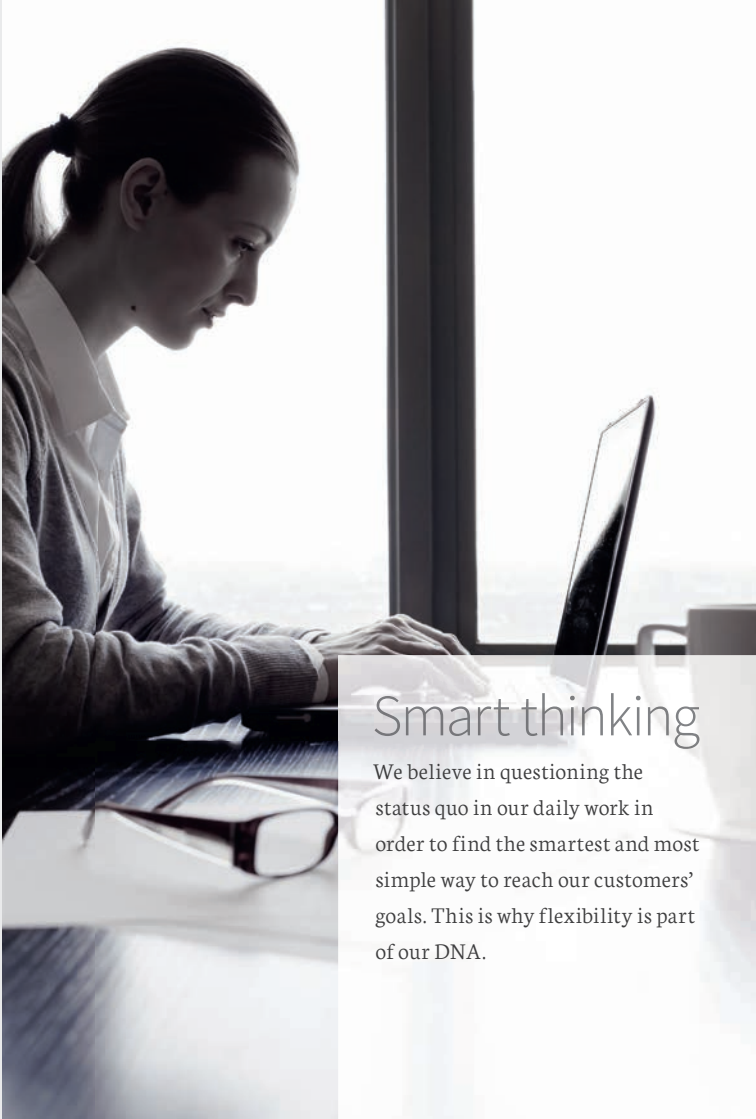

Coming from a multicultural, hard working and ambitious environment, we know that we need to perform outstandingly to succeed on the international market. Industrie-technik was born out of an entrepreneur's dream of developing reliable, quality products to satisfy a big market of HVAC/R customers. He received all the input he needed as he was driving around in his car selling products directly to customers. One of our very first products was a frost protection thermostat - a product that we continue to develop and that is still part of our range.

## Close customer relationships

Today, we no longer ring on doorbells - but we know that good products are born from market input. That's why we've developed a company that builds on close customer relationships and our passion to provide products customers can truly rely on. In order to provide the best service and the right product range we always go back to our core values, the very foundation on which we perform work and conduct ourselves.

## Smart thinking

We believe in questioning the status quo in our daily work in order to find the smartest and most simple way to reach our customers' goals. This is why flexibility is part of our DNA.

## Competence

We believe that actively gathering knowledge makes us thinkers with a distinctive and informed point of view.

## Reliability

We believe in the simple rule of doing what we say we are going to do, both as individuals and as an organization. We keep our promises.

## Reducing complexity

We believe in keeping things simple - from product design to production and customer service. As a result, it is easy to do business with us.

We believe that good products often are born out of frustration with the status quo.

The goal of Industrietechnik is to develop and market a full range of field products necessary for HVAC/R applications. Our comprehensive range includes a complete assortment of valves and actuators as well as electronic and electromechanical devices for reliable measurement and control in building automation.

In the field of liquid flow switches and frost protection thermostats, we are one of Europe's leading companies.

Overall, we cover the complete range of application areas from air-liquid flow and quality, temperature and humidity to pressure.

## Controlling each step in closely knit teams

Our product development is truly customer driven and we control each step of our entire production process, following rigid internal and external standards. In our large-scale testing area every HVAC/R product is repeatedly subjected to extensive tests. We leave nothing to chance and we believe that only in-house tested and retested products are reliable products that our customers can trust.

## EVOLUTION SPLIT MASTER UNIT, ROOM CONTROLLER FOR CONTROLLING MULTIPLE FAN COILS VIA SLAVE UNITS

Evolution Split series equipment enables the control of up to 14 fan coils connected to one master unit. The THS2-0MM is a configurable master / slave unit that when configured as master can be connected to other THS2-0MM units configured as slaves. THS2-0MM is equipped with a second Modbus communication port where it can be connected to a Scada system or to the optional THS2 display unit.

The THS2 display can be configured as master unit and connected to a THS2-0MM unit, it allows you to manage all the parameters and view the status of the internal network. With the THS2-0MM unit configured as a slave, it allows the control of only some operating parameters: on / off, setpoint and fan coil speed.

Evolution Split THS2-0MM can manage 3-speed fan coils or fans with EC motor, on / off valves, modulating valves or 3-point valves.

## CALCULATION OF $K_{vs}$ VALUE

The **pressure drop diagram** allows the Calculation of  $K_{vs}$  for a regulation valve. It correlates the flow rate with the pressure drop. The axes use a logarithmic scale so that you can represent any of  $K_{vs}$  value with a straight line.

Example:

**TO CHOOSE A  $K_{vs}$  VALUE FOR A VALVE HAVING A PRESSURE DROP OF 80 KPA AND A FLOW RATE OF 0,2 L/S:**

- Draw a horizontal line corresponding to the pressure drop value (DP = 80 kPa)
- Draw a vertical line in correspondance of the flow rate value (0.2 l / s)
- Then draw a straight line from the intersection formed up to the nearest  $K_{vs}$  line
- Read the value of the corresponding  $K_{vs}$
- Result: 1.0  $K_{vs}$

## 2-WAY CONTROL VALVES, DN15-50, KVS 0.6-39, 20 MM STROKE

Valves, DN15-50, kvs 0.6-39, 20 mm stroke, designed for control of hot, cold or glycol-mixed water in heating and ventilation systems. They are pressure balanced (from DN20-50, not DN15) and can therefore handle high differential pressure with low force. The valves are intended to be used together with Industrietchnik's SE5... actuators. They should not be used in domestic water systems.

## FROST PROTECTION UNIT

The electronic frost protection unit is mainly intended for use in air handling systems. If the temperature falls below the setpoint, the relays will fall and an alarm LED lights up. The unit should be connected to an NTC sensor placed on the heating coil or return water pipe. The frost protection unit has two alarm relays and manual or automatic reset. The sensor must have 0...30°C temperature range.

When there is frost risk, the device has a 0...10 V DC control output that can be used to override the valve.

## TECHNICAL DATA AND DOCUMENTS RELATED TO THE SUPPLY

Weights, dimensions, prices, performance, colours, pictures and other information, including samples characteristics, indicated in AB Industrietechnik Srl's catalogues, price lists, circular letters or other sales and technical literature are merely indicative and not binding, unless AB Industrietechnik Srl expressly refers to them in its quotation or order confirmation.

AB Industrietechnik Srl reserves the right to make changes at any time to its products' technical specifications in order to improve their performance, informing the Buyer in writing in case the above changes are substantial (i.e. changes affecting: products' installation procedures, products' interchangeability features, etc.).

We reserve our rights on all documents referring to the products and/or made available with quotations, acknowledgements or on delivery. Such documents may neither be copied nor made available to third parties without our written agreement. They must be returned to us on request.

## SHIPMENT

Shipment is ex our works in Bressanone, unless otherwise agreed. As soon as the goods are handed over to the forwarder, all our obligations are considered fulfilled. Therefore, all expenses and risks will be the Buyer's responsibility without any exceptions, even if the shipping charges are prepaid by us. It is the Buyer's responsibility to insure the goods against damage and/or loss. We therefore cannot be held liable for damage and/or loss.

The shipping rates for Italy are at cost price, and we reserve the right to select the most suitable means of transport. In case of payment by cash on delivery, the fees are always incurred by us and debited to the Buyer.

## DELIVERY TERMS

Delivery terms are indicative and are not binding. We cannot be held liable for any production or shipment delay, if such a delay is caused by one of the following reasons: a commercial blockade, difficulties in obtaining raw materials and/or other circumstances beyond our control. In that case we do not accept any penalties and the Buyer renounces any claims for indemnity and/or reimbursement of damages.

We reserve the right to deliver the goods before the agreed date.

## CLAIMS

Claims have to be brought to our attention within 8 days after the receipt of the goods, otherwise we will not accept the said claims. Claims do not authorise delays in payment or further price reductions. In case of packing received damaged, the Buyer must inform the forwarder immediately, and send a copy to us for information.

The total liability of AB Industrietechnik Srl, on all claims of any kind, whether in contract, warranty, indemnity, tort (including negligence), strict liability, or otherwise, arising out of the performance or breach of the contract or use of any product, shall not exceed the value of the product such liability is related to.

In no event shall AB Industrietechnik Srl be liable for loss of profit or revenues ("lucro cessante"), loss of use of the product or any associated equipment, claims of Buyer's or third parties for such damages, or for any special, consequential, incidental, indirect or exemplary damages.

## PAYMENT TERMS

Invoices are payable in the currency specified in the invoice. Payments must be remitted within the agreed deadline. We reserve the ownership of the goods until the invoice and any accessory expenses have been fully paid. Failure by the Buyer to pay by the due date automatically gives rise to interest, giving us the right to deem the contract cancelled because of such failure, unless we prefer to ask for settlement of the amount due, by recourse to law if necessary, with bank interest and damages added. If the Buyer stops a payment, the outstanding amount becomes immediately due and we will file a petition for bankruptcy. Interest on arrears: in the case of delayed payments, interest on arrears will be calculated at the rate of 8 (eight) points above the official rate of discount of the Banca d'Italia in force at the time such interest was applied.

## WARRANTY

All the products supplied by us are guaranteed against construction faults or defects of material for 24 months from the date of delivery, the term by which we shall repair the faulty parts in order to restore correct operation of the appliances. We do not accept any responsibility for direct or indirect damage caused by the use of said appliances. Any return of material must be requested from us in writing, must reach us free our works and will be returned ex our works.

The guarantee is restricted exclusively to the repair at our plant of appliances acknowledged to be defective, whereas all other costs of transport or labour for technical operations on the appliances are charged to the Buyer. The guarantee is voided if the appliances are found to have been tampered with or dismantled. If interventions on appliances not considered to be under guarantee are requested, we reserve the right to debit the Buyer for management of the return € 40,00, spare parts, manpower etc. not included. Errors caused by improper or incorrect use, installation and/or commissioning are not subject to any kind of warranty.

In the event of a dispute, the Buyer accepts that the Bolzano Court of Law is competent and accepts the laws in force in Italy.
