### 1.1-1-06 - Release Date - 24/10/2022

- Added option to add comma separated values in Serial Search range option. If MinValue (ELA or PLA) have comma separated values, it will only search in those values (the Max value will be ignored).
- Better handling of Combo box texts when synchronizing with controller. Only the texts from visible items will appear. Mostly to solve the case when a combo box may have more than one item the same numeric value.
- Solved issue when searching via serial port with multiple controllers in the same bus and sending the broadcast address.
- Added Turkish language option.
- Enable tool tips by default.
- Delete partitions in controller before loading ExoReal and Application. This solves issues with controllers without enough space to load ExoReal into an aux partition before upgrading.
- Improved function to convert application versions.
- Fix issue when opening controller without any configuration opened.
- Added property to controller.cs to defined what partition to activate when loading a controller.
- Added support to load more than one application into one controller.
- Added code to handle two applications in one controller when user connects to it.
- Fixed issue with not showing correct model when converting application to match connected controller.
- Small fix to the Alarm Menu. Align the Filters menu to the right and limit the size of the main list not to overlap the filter selection.
- Fix some issues when converting controllers' versions. Mainly Exigo that uses different models and translation files between 4.2 and 4.3.

#### **Trend tool:**

- Fixed issue when exporting digital chart to PNG.
- Fixed an issue with some excel versions that were opening values as date (US/German version).
- Added Crash log.
- Changes in the save excel file. UI changes (disabled menus if no variables in the chart).
- Stop dragging after mouse leaves the charts area.

#### **Contains:**

THE CHALLENGER

- Modify the Partition routines so they search for the controller again after the partition is changed. The network/serial is searched, and the controllers found are matched against the controller serial. The one with the correct serial is picked.
- On creating partitions add 10% to the space in the controller. Solves issues with Controller Web in Corrigo.
- Added Support for Controller Web Partitions.
- While loading the application into the controller only shows success message after loading all applications into controller.
- After loading application into controller it will set the QSystem.ControllerName to App Name + App Revision. This will improve the search network functions, so the application tool does not need to connect to the controller to read the partitions attributes.
- Optimized load time for the submenus.
- Optimized condition evaluation routines.
- Optimized the reset to default command.
- Optimizations to Evaluate conditions when changing a value in the GUI.
- Improved conversion of configuration files.
- Update to Pdf generation files and dll's.
- Fixed issue with translation files. Now is getting the correct translation language.
