Industrietechnik We have been on the market for 40 years -

Ever since Industrietechnik was established in 1981, the very foundation of our company has been our ability to listen. In close cooperation with every new customer, we have developed our product range into what it is today - a complete and diverse range of HVAC/R field products for measurement and control in building automation.

Our head office and production site is situated in Brixen, South Tyrol, in the heart of the European Alps at the cultural crossroads of northern and southern Europe. Companies from our region are often known for their quality, long standing experience and extensive know-how. Many businesses in our area are market leaders in their sectors, even in an international context. Our five storey building hosts offices, R&D, our testing facilities and a modern production site with state of the art equipment. This gives us full control over the whole production chain from development and design to production and dispatch.

Today, we are a leading provider of one of the widest ranges of field devices including valves and actuators, electronic and electromechanical devices that can be found on the global market. Together, we sell products to installers, system integrators, wholesalers and OEM-customers in more than 80 countries and we are constantly expanding - and we continue to listen.

• We believe in the
• combination of smart
• thinking, competence,
• reliability and the
• reduction of complexity.

• Coming from a multicultural, hard
• working and ambitious environment,
• we know that we need to perform
• outstandingly to succeed on the
• international market. Industrie-
• technik was born out of an entrepre-
• neur's dream of developing reliable,
• quality products to satisfy a big
• market of HVAC/R customers. He
• received all the input he needed as he
• was driving around in his car selling
• products directly to customers. One
• of our very first products was a frost
• protection thermostat - a product
• that we continue to develop and that
• is still part of our range.

Close customer relationships

Today, we no longer ring on doorbells - but we know that good products are born from market input. That's why we've developed a company that builds on close customer relationships and our passion to provide products customers can truly rely on. In order to provide the best service and the right product range we always go back to our core values, the very foundation on which we perform work and conduct ourselves.

Smart thinking

We believe in questioning the status quo in our daily work in order to find the smartest and most simple way to reach our customers' goals. This is why flexibility is part of our DNA.

Competence

We believe that actively gathering knowledge makes us thinkers with a distinctive and informed point of view.

Reliability

We believe in the simple rule of doing what we say we are going to do, both as individuals and as an organization. We keep our promises.

Reducing complexity

We believe in keeping things simple - from product design to production and customer service. As a result, it is easy to do business with us.

We believe that good products often are born out of frustration with the status quo.

The goal of Industrietechnik is to develop and market a full range of field products necessary for HVAC/R applications. Our comprehensive range includes a complete assortment of valves and actuators as well as electronic and electromechanical devices for reliable measurement and control in building automation.

In the field of liquid flow switches and frost protection thermostats, we are one of Europe's leading companies.

Overall, we cover the complete range of application areas from air-liquid flow and quality, temperature and humidity to pressure.

Controlling each step in closely knit teams

Our product development is truly customer driven and we control each step of our entire production process, following rigid internal and external standards. In our large-scale testing area every HVAC/R product is repeatedly subjected to extensive tests. We leave nothing to chance and we believe that only in-house tested and retested products are reliable products that our customers can trust.

We believe that a closely knit organization and smart thinking are essential for the fast and flexible execution of OEM projects.

At Industrietechnik Sales, Purchasing, Development, Economy and Production work side by side. This gives us full insight and control of the entire working process from idea to product and after sales, ensuring quality at every step and on every level of the company. By controlling processes we can plan in advance and optimize our delivery times and at the same time protect customer investments.

This structure makes it possible for us to respond to OEM client demands in a fast and flexible manner. Projects are always coordinated in close cooperation with our customers and in direct communication with our R&D department.

We are listening.

We can handle all kinds of OEM projects, from product branding to in-house programming of software to adapting our products to the need of your specific application. Moreover, the fact that we have very modern production machinery makes it possible for us to provide branded products that are not part of the standard program - and to do so very quickly. We only work with certified suppliers and can handle both small and large volumes.

EXAMPLES OF APPLICATIONS THAT OUR PRODUCTS CAN BE FOUND IN:

- Air handling units
- Fan coils
- Chillers
- Heat exchangers
- Ventilation systems
- Air curtains
- Truck refrigerators

YOUR GRAPHICS, IN YOUR COLOR OF CHOICE

Our products reach the market through a network of sales teams and distributors in over 80 countries and have been installed in a huge variety of buildings on every continent across the world. This has given us important insights into product development and flexible customer service. Our head office is located in Bressanone and we have a local sales office in Milan dedicated to the Italian market. Our global markets are served by our international sales force and our warehouse in Bressanone ensures safe and fast deliveries.

Large quantities of our products reach the market in the shape of OEM products with the name of renowned quality brands or integrated into their range.
